

## Historic Data, Maps, Reports and Other Information from the Ambler VMS (Schist) Belt, NW Alaska

Ambler Metals LLC is seeking information from previous exploration conducted on prospects and lands currently controlled by Ambler Metals through State mining claims and agreements with NANA Corporation in the Ambler VMS Belt and Cosmos Hills. Numerous companies worked in this area during the 1970s and early 1980s, including Bear Creek Mining Co. (Kennecott), Anaconda Minerals Co., Sunshine Mining Co., Cominco, Noranda, GCO, RAA, HOM and WGM. The VMS and carbonate-hosted occurrences cover portions of the Ambler River, Shungnak, Survey Pass, and Hughes quadrangles.

Ambler Metals is attempting to compile all previous work conducted in this area, but some reports, maps, and data from previous company's work are not currently in Ambler Metals' files. We are looking for known, but missing material to add to our files and aid our planned future exploration.

Please contact Ambler Metals if you have data, maps, reports, or other geological, geochemical, or geophysical information that you are willing to provide. Thank you!
